The construction of a new substation compound, including building to house indoor equipment as part of SSEN Transmission's 132kV transformer replacement project adjacent to Lochay Power Station continues to make progress.

Safety is always our first priority at SSEN Transmission and with this in mind, we ask that you please remain vigilant of signage or direction around the construction works and do not enter our working areas.

Progress on site

Construction works are progressing well as depicted in the photo above. The main structures are now erected, underground ducting for cabling has been installed within the substation compound, the building externally is now complete with the internal fit out ongoing and the substation road has been started.

Upcoming works

Our civil works contractor will complete their works including the erection of the substation fence, installation of cable ducts out with the substation, laying the road, erecting the perimeter fence, building the freestanding wall, and completing landscaping. The electrical works will progress with the installation of indoor and outdoor plant.
